EXPERIENCE

Stats Perform — AI Intern

June 2025 – Present

Remote

- Building an internal tool that generates single-page, publication-style HTML sports articles, combining an internal RAG API and OptaAI Chat endpoint for grounding context with Groq-hosted LLM generation.
- Used pydantic-AI to structure and validate the backend orchestration flow, mapping generated content into a fixed HTML template and ensuring required sections exist before rendering.
- Implemented graceful error handling, retry logic for transient Groq failures, and safety checks to keep output reliable and production safe.
- Building the frontend for title input, live preview, raw HTML view, and copy/download, in support of a World Cup 2026 commercial use case.

Grady Health System — Junior Epic Analyst

June – August 2024 & 2023

Atlanta, GA

- Configured and troubleshooted the Epic EHR system to support daily hospital operations.
- Evaluated the Support Central ticketing system and proposed a transition to ServiceNow, improving support workflow efficiency.
- Collaborated with analysts to design a Cath Lab survey using Epic questionnaire tools for structured data collection.

Bloomberg Accelerator Bootcamp

September 2024

- Applied core data structures (arrays, linked lists, trees, hash maps) to solve algorithmic problems under time constraints.
- Presented technical solutions to peers and mentors, strengthening the ability to explain engineering tradeoffs clearly.

PROJECTS

Single-Page HTML Article Generator (RAG Pipeline)

Stats Perform

- Designed a pydantic-AI backend that orchestrates calls to an internal RAG API and OptaAI Chat endpoint, then generates grounded article content via Groq LLM inference.
- Built validation logic ensuring required article sections exist and mapping generated content into a fixed HTML template before rendering.
- Added reliability features: graceful error handling for endpoint/model failures, retry policy for transient Groq errors, and content safety checks (blocking forbidden tags).
- Debugged and resolved a core defect in derive defaults(), improving generation reliability across the pipeline.

StockScope — Stock Analysis Platform

- Contributed to a full-stack Flask web app that lets users search stock tickers, view growth-focused valuation metrics (P/E, net income growth, PEG-style signals), and manage a personalized favorites portfolio.
- Built authentication and user-scoped data storage with DynamoDB, including industry-based filtering via GSI query paths.
- Integrated multiple market data providers (Finnhub, Alpha Vantage, yfinance) with fallback handling for reliability and containerized the app with Docker for local development.

Hangman Game

- Built a Hangman game in React, using component composition, props, and state to manage game logic (letter selection, lives, win/lose conditions).
- Implemented conditional rendering and dynamic UI updates based on player guesses and containerized the app with Docker.

EDUCATION

Morehouse College — B.S. in Software Engineering, Minor in Mathematics

Graduated May 2026

- Relevant Coursework: Data Structures & Algorithms, Computer Programming I & II (C++, Python), Product Management, HTML/CSS, Generative AI

CERTIFICATIONS

- AWS Certified Cloud Practitioner — Amazon Web Services
- AWS Cloud Quest Badge — Amazon Web Services
- AWS Solutions Architect Associate (In Progress)

SKILLS

Technical: Python, C++, SQL, RAG architecture, LLM APIs (Groq), retrieval systems, Git/GitHub, AWS (S3, IAM, Lambda), HTML/CSS, Epic Systems, Data Structures & Algorithms

Soft Skills: Problem-Solving, Team Collaboration, Technical Communication, Cross-functional Leadership

LEADERSHIP & AFFILIATIONS

Morehouse College Track & Cross Country — Co-Captain

August 2024 – May 2026

- Coordinated race strategies and team logistics, fostering collaboration between coaches and athletes.
- Mentored peers to build a supportive team culture, enhancing performance and morale.
- Honors: MVP, SIAC Conference — Cross Country, Indoor and Outdoor Track.
